In addition to my 6+ years of experience, I offer a diverse set of skills in developing, deploying, and monitoring applications, and the creative drive to design and develop entire applications. Proficient in prioritizing and completing tasks in a timely manner and flexible to multitask. I keep myself active by often coding in Hacker Rank and take special pleasure in finding solutions to engineering problems.

## Professional Experience

**Application Development Analyst** | Accenture | Jun'16 – Dec'19

**Member of Technical Staff** | Athena Health | Jan'20 – Sep'21

**Senior Software Engineer III** | Legato Health | Sep'21 – present

### Roles & Responsibilities

*/ As a technical resource /*

- Working with the product team to analyze the problem statement and designers to create seamless UI & UX experience.
- Working with the PO to refine the epics, user stories and create a development roadmap.
- Creating POC for created design and developing skeletal structure for the application.
- Taking responsibility for the core modules of the application.
- Ensuring better code quality by participating as well as working with peers for code reviews.
- Performing code merging activities and creating a CI/CD pipelines.
- Implementing AWS solutions using EC2, S3, Lambda, Autoscaling, ELB, IAM etc.
- Infrastructure orchestration using terraform and cloud formation.
- Configuring the monitoring tools for the applications, infrastructures and creating attractive dashboards and alerts.

*/ other responsibilities /*

- Leading the Dev team with continuous improvement.
- Mentoring and training interns and new hires.
- Working with the recruitment team and conducting interviews to fill vacancies.
- Conducting trainings as part of Learning Management.

## Accomplishments

- I helped the team **bring down infrastructure costs by 810%** by moving towards on-demand.
- I've delivered critical pieces of application (90+ batch jobs) within half the estimated time and automated many critical manual processes using spring batch thus bringing new business and **revenue** from the client up to **60%**.
- I've developed and oversaw the development of an "on-demand environment provisioning ecosystem" which helped the team provision and **maintain 5 times more environments** than during the manual process with more efficiency.
- Worked as part of the Design Language team to create shared Components, Charts, and Maps for react applications that are being used at the organization level.

## Awards

- **Topper** in Accenture Foundation Training
- Received **ACE award** for performance excellence, Client delivery, and future ready skills.
- Received multiple **Star Performer** awards.

## Skills

### Front End

- React
- React Native

### Back End

- Java
- TypeScript
- Python
- SQL

### Frameworks

- Spring Boot
- Hibernate
- Redux

### Security

- Spring Security
- Okta
- SiteMinder

### Artifactory & Repos

- JFrog
- Bitbucket

### Build Tools

- Maven
- Gradle
- Webpack

### CI/CD Tools

- Jenkins
- Argo CD

### Containerization

- Docker
- Kubernetes

### Other Tools

- Kafka
- SonarQube
- Prometheus
- Prometheus-Gateway
- Grafana
- Terraform

### Cloud Platforms

- AWS
